QUICK GUIDE

Thank you for your purchase of Source Code by Emergence Audio!

We recorded the true to original D Type circuitry that became legendary in the 1970s in stunning detail. Six super-high-quality vintage oscillators. The waveforms — Triangle, Sawtooth, Reverse Sawtooth, Square, Wide Pulse, and Narrow Pulse, combined with our innovative Infinite Motion Engine takes this vintage analog tone to a completely new dimension of creativity and experimentation. From stunning super-fat bass lines and leads to progressive organ sounds. Transform these legendary vintage oscillators into evolving pads, drones, pulses, soundscapes and more.

Preset Concepts:

"INIT_Source Code.nki" Is a start-from-scratch patch from which all presets were created.

INFINITE PADS: These presets have a much more experimental approach.

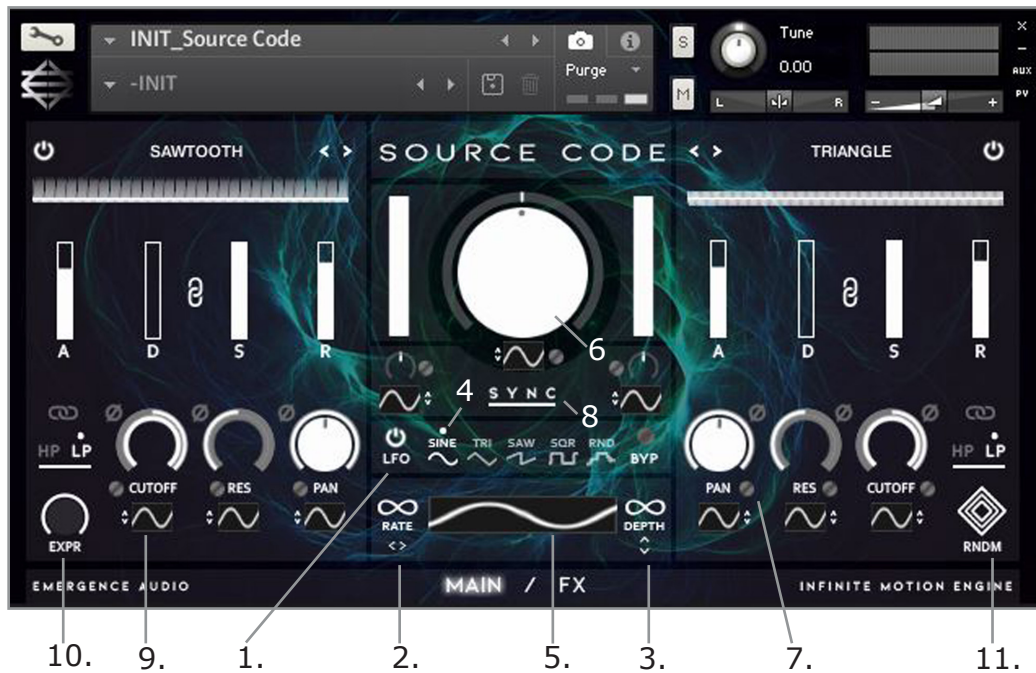

CORRELATED: The Theory of our universe is the foundation for the Infinite Motion Engine™. This is a concept on how something can exist acoustically in two different places, but still be a part of the same source and generate something entirely new and intricate.

PULSES: Creates a pulsing or swelling sound using our LFO component. A great tool for enhancing your compositions' dynamic range and movement.

MULTIS: Various presets have been mixed in unusual and experimental ways to create these multi patches. You can experiment with countless combinations and ideas.

KEYS AND LEADS: Keys are patches that play brief notes to create melodies and sparsity, whereas Leads are ideal for solos. We've reassigned the mod wheel to fine-tune LFOS on the Leads patch to generate a vibrato effect, giving you more expressive options.

INFINITE MOTION ENGINE MAIN PAGE

*IME SUPPORTS CC LEARN. RIGHT-CLICK A MIDI CONTROLLER KNOB OR FADER TO ASSIGN IT.

1. ON/OFF LFO SWITCH: When this button is clicked, the LFO modulation is turned on or off.

2. RATE: Left-click and hold the horizontal infinity symbol left or right to adjust the rate/speed of the sinewave LFO.

3. DEPTH: To change the depth of the crossfade, left-click and hold before moving the mouse up or down.

4. LFO SELECT TOOL: This section gives you the option of selecting one of five different LFO shapes/modulation types.

5. WAVEFORM WINDOW: Displays a visual representation of the currently selected LFO.

6. CROSSFADE: Crossfades between both selected layers (CC#1)

7. LFO LINK BUTTON: Connects the selected parameters to the master LFO to control the intensity of the depth individually.

8. LFO TEMPO SYNC: This option lets you Quantize to the Tempo of your session and select from a variety of divisions.

9. ATTENUVERTER: Sets an LFO percentage relative to the master LFO by click/hold and dragging the button up or down.

10. EXPRESSION: Controls the overall master volume of the patch (CC#11)

11. RANDOMIZER: The randomizer will only influence the low pass, high pass, pan knobs, and attenuverter underneath them, as well as the source material on both layers.

12. LFO BYPASS: This button locks each parameter's RELATIVE VALUES to the master LFO.

13. VOLUME FADER: Controls the volume of each layer; the lower the volume, the lighter the color, and the more transparent the fader.

14. FINE TUNE KNOB: Lets you change the pitch of the entire layer by one octave up or down or anywhere in between.

15. PURGE LAYER BUTTON: Deactivates the layer by removing it entirely from the interface. This is useful if you want to preserve RAM space or hear the second layer on its own quickly.

16. LAYER MENU: Left-click the layer text to bring up the dropdown box where you can choose which source material to use.

17. WAVEFORM: Is a graphical depiction of the sound source.

18. ADSR: Attack, decay, sustain, and release of the layer.

19. FILTER LINK: When enabled, this causes both filter link layers to work in unison. You can also double-click the link button to ensure that both the LP or HP filters are shown without having to click the other layer.

20. LOW AND HIGH PASS FILTERS: This button alternates between filters, allowing you to fine-tune the prospective bandwidth.

21. POLARITY FLIP: Allows you to reverse the direction of the LFO by changing its polarity.

INFINITE MOTION ENGINE EFFECTS PAGE

1. CONVOLUTION REVERB: 50+ top-tier impulse response reverbs, ranging from real rooms to the iconic Lexicon reverbs, including the L480, L300, and L96. With tails ranging from 1 to 31 seconds.

2. DELAY: Delay provides sync choices ranging from full to 1/256 as well as dotted notes. To generate a ping pong effect, turn the pan knob all the way up.

3. PHASER: With an all-pass filter, this effect alters the phase relationship in your signal.

4. WIDTH: This is a stereo imager; rotating the knob to the right will broaden the sound. Turning it all the way to the right will make it mono.

5. DISTORTION: The signal is affected by a transistor effect.

6. SATURATION: This effect brings warmth to the signal and emulates a classic analog tone.

7. ROTATOR: The Rotator effect realistically simulates the sound of rotating speaker cabinets

8. CHORUS: This module thickens the audio signal by splitting it into two versions and detuning one of them in relation to the original.

9. LO-FI: This effect module adds numerous digital artifacts to a clean signal, such as quantization noise or aliasing.

10. TAPE SATURATION: Gives a sound analog warmth and presence.

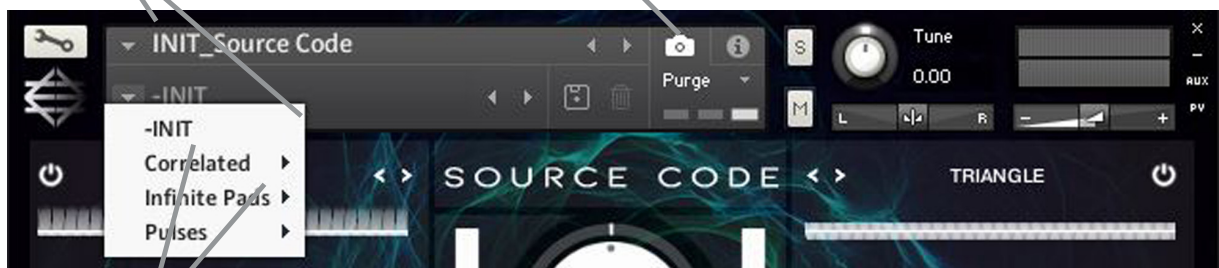

11. SYNC: Locks the delay to the session's tempo and provides rhythmic possibilities.

12. MAIN & FX PAGE BUTTON: You can switch between the main and effect pages by left-clicking this area with your mouse.

The background is a dark, almost black, space filled with a complex, organic pattern of glowing lines. These lines, in shades of vibrant blue and emerald green, swirl and curve to form a large, irregular circular shape that resembles a nebula or a microscopic organism. The lines vary in thickness and brightness, creating a sense of depth and movement. In the center of this glowing structure, the text "EMERGENCE AUDIO" is displayed in a clean, white, sans-serif font, followed by a registered trademark symbol (®).
